

College Assignment Submission Tracker

Scenario:

A college department struggles to track assignment submissions across multiple subjects. Faculty want a dashboard to view submitted, pending, and late assignments.

Key Features:

- Add assignment (title, subject, due date)
- Mark submission status (Submitted / Pending / Late)
- Filter by subject
- Dashboard summary (counts)

2. Trainer Session Attendance Dashboard

Scenario:

Training managers need a system to track daily student attendance across multiple batches.

Key Features:

- Mark attendance (Present/Absent)
- View batch-wise attendance
- Date-wise filtering
- Attendance percentage calculation

3. API-Based COVID/Health Stats Tracker

Scenario:

A health awareness organization wants to display real-time data for awareness campaigns.

Key Features:

- Fetch live API data
- Country-wise search
- Display stats (cases, recovery, etc.)
- Conditional alerts (high-risk countries)

4. Mini E-Commerce Cart System

Scenario:

A startup wants a simple product listing app with cart functionality before building a full system.

Key Features:

- Product list (API/static)
- Add/remove from cart
- Quantity management
- Total price calculation

5. HR Employee Leave Management Tool

Scenario:

HR teams want a simple internal tool to track employee leave requests.

Key Features:

- Apply leave form
- Leave status (Approved/Rejected/Pending)
- Filter by employee
- Leave history display

6. Workshop Registration & Confirmation App

Scenario:

An institution conducts workshops and needs a system to handle registrations and confirmations.

Key Features:

- Registration form
- Store participant list
- Confirmation message
- Prevent duplicate entries

7. Recipe Search with Ingredient Filter (API-Based)

Scenario:

Users want to cook using available ingredients at home and need suggestions.

Key Features:

- Search recipes via API
- Filter by ingredient
- Display recipe details
- Conditional rendering (no results case)

8. Daily Expense Analytics Dashboard

Scenario:

A working professional wants insights into spending habits.

Key Features:

- Add income/expense
- Category-wise tracking
- Total balance calculation
- Basic analytics (category summary)

9. Content Creator Blog Manager

Scenario:

A freelance writer wants a simple app to manage blog drafts before publishing.

Key Features:

- Create/edit/delete posts
- Draft vs Published status
- Search posts
- View detailed blog page

10. Job Portal with Search & Filters

Scenario:

A placement cell wants a portal where students can explore job openings easily.

Key Features:

- Job listings (API/static)
- Filter by role/location
- View job details
- Save/bookmark jobs
